

Minimise the spread of germs in your building by using a mat washing service. UK Mats wash 20,000 mats a week in detergent and hot water at 60°C to ensure your mats are fully clean. For all you mat washing requirements please contact us and we will be happy to assist.

COVID-19 on Shoes

Infectious disease specialists have warned that COVID-19 can live on the soles of shoes for up to five days, with footwear more likely to carry coronavirus if it has been worn in busy areas like supermarkets, airports or on public transport.

This contamination is then transferred to your mats and floors each time someone enters your premises.

Transfer Risk Reduction

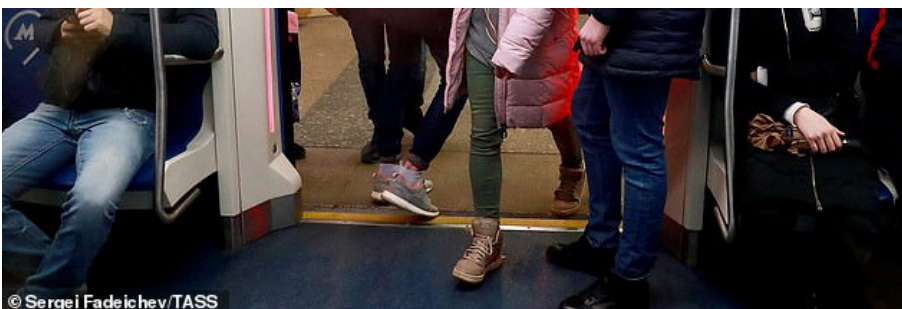

People who are not working from home and continuing to commute, like healthcare workers and shop assistants, are advised to use one pair of shoes for any time spent out of the house.

However, it's not always practical to ask people to change shoes when entering your business premises.

COVID-19 on other surfaces

A study published in the New England Journal of Medicine showed coronavirus can live on cardboard for 24 hours and on stainless steel and plastic for up to to three days.

Frequently touched surfaces like taps, phone cases, door handles, computer keyboards and toilets should be cleaned using bleach or alcohol solutions of at least 70 percent alcohol.
